Narrative.

The 54th Maintenance Squadron's lineage makes it one of the oldest units in the wing. Constituted on 26 March 1941, the 4th Repair Squadron was activated on 1 April 1941 at Patterson Field, Ohio, as part of the 4th Air Depot Group (later, 4th Air Depot). On 1 July 1941, the squadron was redesignated as the 4th Depot Repair Squadron. As such the squadron performed the most difficult aircraft maintenance jobs, officially called fourth echelon maintenance, for multiple combat flying squadrons.

Assigned to the Pacific theater, the unit arrived at Bacchus Marsh, outside of Melbourne, in southern Australia, on 1 February 1942. At that time, many expected the Japanese would soon invade Australia. To protect one of the few units with its capabilities, planners placed the squadron and its group well outside of the enemy's range of operations. Three days later, it moved about 30 miles south to Geelong, Australia. On 15 April 1942, the squadron relocated to Wagga Wagga, approximately half way to Sydney, Australia. On 3 July 1942, it moved back about half the distance toward Bacchus Marsh, locating at Tocumwal, Australia. As the Allies began to counter attack in the summer of 1942, planners wanted the depot to be closer to the combat forces it supported. On 28 October 1942, the squadron moved to Townsville, on the northeast coast near Cairns, Australia. Due to General Douglas MacArthur's island hopping campaign, the depot moved two more times to be closer to the units they were supporting. Due to the size and weight of the heavy equipment the depot used and the tons of supplies it needed, moving it became more and more difficult. Therefore, the squadron left Townsville on 2 December 1944 and arrived at Tacloban on the island of Leyte on 9 January 1945. Just over two months later, it moved again to Nichols Field, Luzon. For its efforts in the Pacific Theater, the squadron earned a Philippine Presidential Unit Citation, and two campaign ribbons. In December 1946, it reassigned to the Philippine Air Materiel Area. A month later, it moved to Clark Field on Luzon. Around 13 May 1947, the squadron moved to Tachikawa AB, Japan, and was reassigned to the Japan Air Materiel Area. On 1 July 1949, the unit was reassigned to the Far East Air Materiel Command and inactivated 21 days later.

On 3 May 1966, the unit was redesignated the 4th Maintenance Squadron, Mobile and activated in the Reserve at Wright-Patterson AFB, Ohio, as part Continental Air Command. Two months later, it was reassigned to the First Air Force Reserve Region. On 31 December 1969, it was assigned to the Eastern Air Force Reserve Region. On 8 October 1976, the squadron was again reassigned to the 302d Tactical Airlift Wing. The unit inactivated on 1 October 1978.

On 22 October 1984, the unit was redesignated as 54th Consolidated Aircraft Maintenance Squadron, but not activated. On 20 February 2014, the unit was designated as the 54th Maintenance Squadron. On 1 March 2014, squadron reactivated in the active force at Holloman AFB, New Mexico, under the 54th Fighter Group. Its current mission is to accomplish primarily off-equipment with some on-equipment maintenance in support of the group's mission of training the best F-16 pilots in the world.

Lineage, Assignments, Stations, and Honors through 16 Apr 2014.
